

1. Develop a Student Information Portal using Java Servlets to dynamically display university details, department information, faculty details, course information, laboratory details, and current system date and time.

Index.html

```
<!DOCTYPE html>

<html>

  <head>

    <title>Student Portal</title>

  </head>

  <body>

    <h1> Student Information </h1>

    <form action="student" method="get">

      <button type ="submit" name ="info" value="univ">

        Show University Details

      </button>

      <button type ="submit" name ="info" value="course">

        Show Course Details

      </button>

      <button type ="submit" name ="info" value="sub">

        Show Subject Details

      </button>

      <button type ="submit" name ="info" value="faculty">

        Show Faculty Details

      </button>

    </form>

  </body>

</html>
```

StudentInfo.java

```
package com.og.practical1c;
```

```
import jakarta.servlet.ServletException;
```

```
import jakarta.servlet.http.HttpServlet;
```

```
import jakarta.servlet.http.HttpServletRequest;
```

```
import jakarta.servlet.http.HttpServletResponse;
```

```
import java.io.IOException;
```

```
import java.io.PrintWriter;
```

```
public class StudentInfo extends HttpServlet{
```

```
    @Override
```

```
    protected void doGet(HttpServletRequest req, HttpServletResponse resp) throws  
ServletException, IOException {
```

```
        String value = req.getParameter("info");
```

```
        PrintWriter out= resp.getWriter();
```

```
        if(value.equals("univ")){
```

```
            out.println("Poornima University");
```

```
        }else if(value.equals("course")){
```

```
            out.println("B.Tech AI&DS");
```

```
        }else if(value.equals("sub")){
```

```
            out.println("Advance Java");
```

```
        }else{
```

```
            out.println("OG");
```

```
        }
```

```
    }
```

```
}
```

Web.xml

```
<servlet>
    <servlet-name>std</servlet-name>
    <servlet-class>com.og.practical1c.StudentInfo</servlet-class>
</servlet>
<servlet-mapping>
    <servlet-name>std</servlet-name>
    <url-pattern>/student</url-pattern>
</servlet-mapping>
```
